

AYUBHOWAN

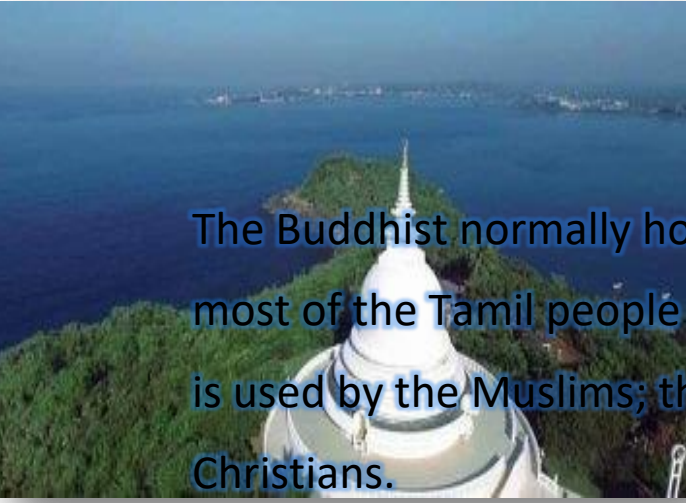

Welcome all of you, who visits my site, it is wanted to give you better and different experience during your vacation on Sri Lanka. Ayubhowan is our welcome word. That is a one of the splendid words in our language Sinhala , it is made by two words AYU and BOHOWAN, AYU is meant age, BOHOWAN means , blessing you to expand the life time, actually that is a word which is blessing you happy,healthly,wealthy long life.

So most of the visitors have been normally on common and famous places which are in Sri Lanka, like Sigiriya, Dambulla, Anuradhapura, Ella, Tooth temple in Kandy, Botanical garden etc..., but they don't know the beauty that is hidden in village or rural areas. The beauty of village is enhanced by the traditional culture.

About the traditional family and culture will be catch during the visit of my site.

The places are mentioned above, are most tourist attracted , visiting them very very interesting and very important, but I want to invite you visit and study our traditional culture in village. Actually in city area you can see the mixture of modern and traditional culture. But pure culture still remains inside of a village.

The Buddhist normally homage on Buddhist temple. The most of the Tamil people homage on Hindu temple, mosque is used by the Muslims; the Catholic Church is used by Christians.

As per the legendary Sri Lanka is a Sinhalese Buddhist country, but all live together in this land peacefully. It is like a multi religious, multi ethnic country.

The village built around the temple associates with lake & pagoda. The paddy field is just closed to those. The paddy field enhances the significant; because that is the staple food who lives in this land is rice and curry. This union is the symbol of prosperity. The pagoda is like a symbol of Buddhism. It is very meaningful, that is not

only religiously but also scientifically. Because of its shape like pyramid and pinnacle is able to collect the nitrogen that is broken its bond because of lightning, and made nitrate which is very important fertile for made a rich soil that mixes with rainy water and that is flowing through the body of pagoda and released them to the lake that locates just it closed. This rainy water mixed with nitrate, preserved on lake that is used at the time lack of water in drought period to cultivate paddy.
